BANKER MASONS STONE MERCHANTS QUARRY OPERATORS

Hazeldean (formerly known as Cragg Hill)

Hazeldean Sandstone.

Technical Information

Description:

Quarried near Alnwick in Northumberland, **Hazeldean Sandstone** is both visually and geologically a good match for the no longer available Craigleith Sandstone. It is generally a light white to cream colour and is suitable for all types of architectural building applications including new build, restoration and conservation works, and in particular will greatly compliment the original building stones of Edinburgh and Glasgow.

Geological Type: Lower Carboniferous

Predominant Colour: Light White to Cream

Texture: Fine Grained

Block Size: Available up to 3m long x 1m high

Physical Information

Bulk Density: 2240KG/m³

Compressive Strength: 84.0 N/mm²

Flexural Strength: 4.1 MPa (wet) – 5.2 MPa (dry)

Porosity: 13.1%

Absorption: 3.7%

Saturation Co-efficient: 0.73

Acid Immersion: Passed

Please note that stone is a natural product and all results are subject to variation.
